

PERFORMANCE & CONSISTENCY RULES

What are the performance and consistency rules that apply to Instant accounts?

15% Consistency Score

To request a payout, traders must meet a consistency score of 15%. This means the largest winning day cannot exceed 15% of the total net profits generated on the account.

If a payout has already been requested, the your largest winning day cannot exceed 15% of the total net profits generated on the account since the last payout on that account was requested.

Examples

Example 1

If the total net profits generated on your account since you started trading on it is \$5,000 then your biggest winning day should not be greater than \$750 ($\$5,000 \times 15\%$).

Example 2

Similarly, if the total net profits generated on your account since your last payout is \$5,000 then your biggest winning day should not be greater than \$750 ($\$5,000 \times 15\%$).

Example 3

If your biggest winning day is \$1,000, then you will have to make a total profit of \$6,667 ($\$1,000 / 15\%$) on your account before you are eligible to request a payout.

Example 4

If your biggest winning day is \$2,250, then you will have to make a total profit of \$15,000 ($\$2,250 / 15\%$) on your account before you are eligible to request a payout.

3% Safety Buffer

The first 3% of profits generated on the Instant account, over and above the initial balance of the account, serves as a safety buffer. This buffer is there to ensure that you have a sufficient drawdown allowance after requesting a payout. This is to avoid breaching your account as your daily loss limit reset back to your account's initial balance.

If your max loss limit has trailed beyond your account's initial balance, then this will also reset back to your account's initial balance after a payout request. If your max loss limit has not trailed past your initial balance, then this will continue trailing at 5% from the highest balance or equity achieved on your account.

Biggest Loss vs. Biggest Win

Your largest single loss must not exceed your largest single win. If this condition is not met, you will need to continue trading until the rule is satisfied.

2 Minute Average Duration Rule

The average duration of all trades should exceed 2 minutes to prevent tick scalping and high-frequency trading manipulation.

Any profit made within 2 minutes on a Instant account will be deducted from your total balance upon payout.

If the total deductions made on your account total 25% or more of your requested profit share, your payout will be rejected and your profit share forfeited.

Inactivity

There is no inactivity rule for accounts that have not yet been traded on. If any Instant trading account is inactive for more than 30 days at any time after the 1st trade has been placed on the account, then the account will be terminated. To keep the account active, you must open and close at least one trade within each 30 day period.

NEWS TRADING

Can I trade High Impact/red folder news?

Legacy / Swift Evaluation Challenges

You are allowed to hold trades during news events and over the weekend. However, you are not allowed to open or close a trade **2 minutes before and 2 minutes after** high-impact news events.

Flagship Evaluation Challenges

You are allowed to hold trades during news events and over the weekend. However, you are not allowed to open or close a trade **5 minutes before and 5 minutes after** high-impact news events.

The news trading rule does not apply during the Evaluation phase of Flagship Challenges.

Instant Accounts

You are allowed to hold trades during news events, but not over the weekend. However, you are not allowed to open or close a trade **8 minutes before and 8 minutes after** high-impact news events.

This rule applies to all types of trades, including manual open or close, pending orders, stop loss, and take profit orders.

Note

USD high impact news restricts trading on all trading pairs

Non-USD high impact news only restricts trading for trading pairs linked to that specific currency

Non-USD high impact news restricts trading for both forex pairs and indices

Examples

CHF high impact news or speeches will only apply to CHF trading pairs. Non-CHF trading pairs can still be traded during this time.

EUR high impact news or speeches will only apply to EUR trading pairs. Non-EUR trading pairs can still be traded during this time.

USD high impact news or speeches will apply to all trading pairs. No trades should be executed as per the news rule restrictions for your account.

EUR high impact news also applies to GER30 / FRA40 / ITA40

GBP high impact news also applies to UK100

Speeches

During speeches, the same time restrictions apply as for high-impact news events, except that the restricted time window starts before the speech, and ends after the speech concludes. e.g. for a Instant Account, you are not allowed to open or close a trade 8 minutes before the speech begins and 8 minutes after the speech ends.

Evaluation phase

Traders are permitted to hold trades over the weekend and engage in trading activities during news events.

If your Take Profit or Stop Loss is activated or filled during the restricted time window of **2 minutes before and 2 minutes after high-impact news events** (Legacy / Swift challenges)

it will be considered a breach of the Equity Edge challenge.

This applies to all forms of orders, including manual open or close, pending orders, stop loss, and take profit orders.

This rule does not apply to the Evaluation phase of Flagship Challenges.

Funded phase

Funded Traders are allowed to hold trades during news releases and over the weekend. On the funded account, **high-impact news** event trading will result in the deduction of any profits made from trades executed within the **restricted news window**.

This will not violate the funded account, but only the trade(s) opened or closed within the **restricted news window** will be reviewed, and the profits will not be counted during payout.

If the profits generated from news trades exceeds 25% of the trader's profit share, the payout will be rejected, your profit share will be forfeited and the account will be reset back to its initial balance.

This applies to all forms of orders, including manual open or close, pending orders, stop loss, and take profit orders.

Example for Evaluation Challenges

If you have high-impact/red folder news at **5pm UTC**, trades cannot be opened or closed from:

4:58pm to 5:02pm on Legacy / Swift challenges

including TP, SL in profit, or any limit orders, buy stop/sell stop, or manually open and close.

Instant Accounts

You are allowed to hold trades during news events. However, you are not allowed to open or close a trade **8 minutes before and 8 minutes after** high-impact news events.

The trade(s) opened or closed within the **restricted 8-minute window** will be reviewed, and the profits will be deducted during payout. If the profits generated from news trades exceeds 25% of the trader's profit share, the payout will be rejected, your profit share will be forfeited and the account will be reset back to its initial balance.

Repeat offences may also lead to the termination of your account. This rule applies to all types of trades, including manual open or close, pending orders, stop loss, and take profit orders.

Note

USD high impact news restricts trading on all trading pairs

Non-USD high impact news only restricts trading for trading pairs linked to that specific currency

Non-USD high impact news restricts trading for both forex pairs and indices

Examples

CHF high impact news or speeches will only apply to CHF trading pairs. Non-CHF trading pairs can still be traded during this time.

EUR high impact news or speeches will only apply to EUR trading pairs. Non-EUR trading pairs can still be traded during this time.

USD high impact news or speeches will apply to all trading pairs. No trades should be executed as per the news rule restrictions for your account.

EUR high impact news also applies to GER30 / FRA40 / ITA40

GBP high impact news also applies to UK100

Example for Instant Accounts

If you have high-impact/red folder news at **5pm UTC**, trades cannot be opened or closed from **4:52pm to 5:08pm**, including TP, SL in profit, or any limit orders, buy stop/sell stop, or manually open and close.

 We use [forexfactory.com](https://www.forexfactory.com) as our source for the news calendar.

TRADING RULES AND GUIDELINES

1 - Trading Conduct and Regulations

We provide 6 Equity Edge Evaluation challenges:

- 1-Step Legacy Evaluation
- 1-Step Swift Evaluation
- 1-Step Flagship Evaluation
- 2-Step Legacy Evaluation
- 2-Step Swift Evaluation
- 2-Step Flagship Evaluation

Successful completion of either is required to qualify as a funded trader. Possessing a dynamic trading system and a robust risk management profile is essential for passing the evaluation challenges. Once you achieve your profit target, our Risk Team will conduct a manual review of your entire evaluation period, concluding within 3 working days.

We also provide an **Instant** account where you can start generating profits towards your payout straight away without the need to pass a challenge first.

In the event of any violation of the rules outlined in this section, immediate closure of all positions on the broker's platform will occur, the Customer's Account will be terminated, and the right to payout will be forfeited.

1-Step Legacy Evaluation

Within the 1-Step Legacy evaluation challenge, the profit target is set at **10%** of the starting demo account simulated balance.

Daily loss limit: 4%

The daily simulated drawdown is set at 4%.

Maximum Loss Limit: 6% (Trailing)

The max simulated drawdown is still set at 6% trailing from your highest simulated balance or equity achieved at all times.

Example

Consider starting with a \$100,000 demo account, a daily simulated drawdown level of \$96,000, and a max trailing simulated drawdown of \$94,000. If you realize a simulated profit of \$5,000, elevating your demo account balance to \$105,000, the new daily simulated drawdown level for the next day becomes \$100,800 (computed as $\$105,000 - 4\%$). The max simulated trailing drawdown will be \$98,700 (computed as $\$105,000 - 6\%$) as it trails from the highest recorded simulated balance of \$105,000. Similarly, if you attain a simulated profit of \$9,000 at any point in time, the max simulated trailing drawdown will be \$102,460 (computed as $\$109,000 - 6\%$). Notably, simulated drawdown encompasses profits, losses from closed positions, swap fees, and commissions associated with simulated trading.

Resetting Simulated Daily Drawdown and Max Simulated Trailing Drawdown:

The daily simulated drawdown resets every day at 22:00 London time. The max simulated trailing drawdown is always based on the highest recorded simulated balance or equity.

1-Step Swift Evaluation

Within the 1-Step Swift evaluation challenge, the profit target is set at **8%** of the starting demo account simulated balance.

Daily loss limit: 3%

The daily simulated drawdown is set at 3%.

Maximum Loss Limit: 5% (Trailing)

The max simulated drawdown is still set at 5% trailing from your highest simulated balance or equity achieved at all times.

Example

Consider starting with a \$100,000 demo account, a daily simulated drawdown level of \$97,000, and a max trailing simulated drawdown of \$95,000. If you realize a simulated profit of \$5,000, elevating your demo account balance to \$105,000, the new daily simulated drawdown level for the next day becomes \$101,850 (computed as $\$105,000 - 3\%$). The max simulated trailing drawdown will be \$99,750 (computed as $\$105,000 - 5\%$) as it trails from the highest recorded simulated balance of \$105,000. Similarly, if you attain a simulated profit of \$9,000 at any point in time, the max simulated trailing drawdown will be \$103,550

(computed as \$109,000 - 5%). Notably, simulated drawdown encompasses profits, losses from closed positions, swap fees, and commissions associated with simulated trading.

Resetting Simulated Daily Drawdown and Max Simulated Trailing Drawdown:

The daily simulated drawdown resets every day at 22:00 London time. The max simulated trailing drawdown is always based on the highest recorded simulated balance or equity.

1-Step Flagship Evaluation

Within the 1-Step Legacy evaluation challenge, the profit target is set at **10%** of the starting demo account simulated balance.

Daily loss limit: 4%

The daily simulated drawdown is set at 4%.

Maximum Loss Limit: 6% (Trailing)

The max simulated drawdown is still set at 6% trailing from your highest simulated balance or equity achieved at all times.

Example

Consider starting with a \$100,000 demo account, a daily simulated drawdown level of \$96,000, and a max trailing simulated drawdown of \$94,000. If you realize a simulated profit of \$5,000, elevating your demo account balance to \$105,000, the new daily simulated drawdown level for the next day becomes \$100,800 (computed as \$105,000 - 4%). The max simulated trailing drawdown will be \$98,700 (computed as \$105,000 - 6%) as it trails from the highest recorded simulated balance of \$105,000. Similarly, if you attain a simulated profit of \$9,000 at any point in time, the max simulated trailing drawdown will be \$102,460 (computed as \$109,000 - 6%). Notably, simulated drawdown encompasses profits, losses from closed positions, swap fees, and commissions associated with simulated trading.

Resetting Simulated Daily Drawdown and Max Simulated Trailing Drawdown:

The daily simulated drawdown resets every day at 22:00 London time. The max simulated trailing drawdown is always based on the highest recorded simulated balance or equity.

2-Step Legacy Evaluation

Phase 1

In the initial phase, we evaluate your trading skills and encourage you to establish your identity as a trader. Your goal in Phase 1 is to reach a profit target of 10% without violating any other rules. Upon successful completion, you can expect to receive your Phase 2 account within 2 hours.

Phase 2

Phase 2 is designed to validate the results and achievements of Phase 1. In this stage, your objective is to attain a profit target of 5% without violating any other rules.

Daily Loss Limit: 5%

Traders have a safety net called the Maximum Daily Loss, capping the amount they can lose each day. This rule uses the higher value between equity and balance and sets the limit at 5% of the starting equity or balance (whichever is the highest). Put simply, the trader's total

losses for the day, including both current and closed positions, shouldn't go beyond this 5% limit. The reset happens every day at 22:00 UK time.

Maximum Loss Limit: 10%

The Maximum Loss Limit ensures that the equity or balance stays above a specific level. This regulation is fixed at 10% of the initial account size. For instance, if a trader has a \$100,000 account with a 10% Maximum Loss Limit, the equity or balance must not dip below \$90,000 under any circumstances.
